National Securities Depository Ltd.

Participant Interface
Circular

Circular No.: NSDL/POLICY/2011/0022 Date: March 10, 2011

Sub: Housekeeping of log files from Local DPM System.

As Participants may be aware, during the regular operations of the Participants, certain log files are created in the Local DPM System which affects the performance of the Local DPM System which result in problems like latest status of instructions not getting updated in the Local DPM System, message processing takes more time, etc.

In order to improve the performance of the Local DPM System, Participants are advised to clear these log files as per the procedure given below:

1. Identify the folders where the log files are created in the DPM Server (names given below):

    a) Received Data
    b) XML Directory
    c) Upload Directory
    d) Export Directory
    e) Response

2. At regular intervals (preferably daily), move all the contents of the above folders to another drive where sufficient free space is available.

Participants may note that a separate utility will be provided shortly to assist the Participants in housekeeping of the log files.
